

Waterproofing – The Focus of a Nation

Waterproofing is making headline news across the nation. Currently with major leaking in the Malaysian Parliament Building and other prestigious projects from east to west, the nation's focus, now more than ever, is on the quality of waterproofing application, workmanship and long-term results.

The Answer is E P Waterproofing System™

Failure of membranes and other surface coatings is due to poor workmanship methods by contractors, sub-contractors as well as poor application methods – simply reading the instructions on the label does not make for good waterproofing. Many local waterproofing jobs are applied by non-skilled workers with no experience in correct surface preparation or no knowledge of waterproofing at all.

As Malaysia's only waterproofing manufacturer to establish authorised applicators trained in International Waterproofing Standards and techniques in every state of the nation, E P Borneo Sdn Bhd is leading the way in construction waterproofing, effectively guaranteeing quality workmanship, long-term results and, most importantly, technical back-up direct from the manufacturer.

The company's team of trained applicators has the know-how and skills to complete projects on time and below budget as well as offer a combined manufacturer and workmanship warranty. In short, E P™ is setting the standard for waterproofing in the Malaysian construction scene.

E P Waterproofing System™ provides the latest in waterproofing technology:

- E P Waterproofing System™ is not a surface coating; it penetrates deep into concrete forming a monolithic barrier against water vapour and various containments, pollution and staining.
- E P™ does not – peel off; wear away; tear; crack; or become damaged by sub-trades.
- E P™ dries quickly, allowing sub-works to commence once the surface is dry to walk on – about 45 minutes.
- E P™ - Ten Year Warranty – Offering on-site training of workers and technical back-up for all site staff from the manufacturer.

Simply put, traditional surface coatings are not suited for our tropical climate as they are easily damaged by workers, UV pollution and inclement weather. For the most optimum waterproofing solution with no leaks – the answer is E P™.
